

Concept

Ranking analysis combines:

A Dimension – The business entity to be ranked (e.g., Country, Product, Customer, Category).

An Aggregated Measure – The metric used to evaluate performance (e.g., Total Sales, Total Quantity, Total Orders).

The general formula is:

Dimension

The business entity whose values will be ranked.

Aggregate Measure

The metric used to measure performance.

Sort

Highest → Lowest
(Descending Order)

OR

Lowest → Highest
(Ascending Order)

This approach produces an ordered list that highlights the relative performance of each dimension value.

Example

Dimension:
Country

Aggregated Measure:
Total Sales

Ranking (Highest → Lowest)

Rank	Country	Total Sales
1	United States	\$1,250,000
2	Canada	\$850,000
3	United Kingdom	\$620,000
4	Germany	\$540,000
5	France	\$430,000
...	...	...
